

Lindsey Bieda

📍 San Mateo, US ✉ lbieda@gmail.com 🌐 LindseyB

Lindsey is a results-driven software engineering manager with a passion for building inclusive, high-performing teams and fostering positive, collaborative cultures. She combines creative vision with strong analytical skills to deliver innovative solutions and empower teams to achieve ambitious goals. Lindsey is dedicated to mentoring talent, driving continuous improvement, and ensuring both business and team success.

Experience

Staff Engineering Manager

January 2024 — Present

GitHub

- Took over a team of 7 to deliver flagship GitHub Copilot features for GitHub Universe, including Issue Summarization, Pull Request integration, and more.
- Led the Copilot for PRs team through a successful transition to a new structure, ensuring continued team effectiveness and morale.
- Built and managed a new team of 10 engineers across NA and APAC regions for GitHub Models, a distinct product separate from Copilot.
- Successfully led the first public preview launch of GitHub Models at GitHub Universe 2024 and then later public preview of Models now integrated into repositories for Microsoft Build 2025.

Staff Engineer

September 2022 — January 2024

GitHub

- Continued on as the anchor for the discussions team, acting as lead and point of contact for external teams and assuring work was moving forward
- Created the standard for how hackathons were run and operated at GitHub based on the success for running hackathons at our organizational level
- Developed a pilot program for engineering rotations in order to prevent burnout and increase team morale which quickly became an organizational standard
- Worked with the GitHub Sponsors team to ship the GitHub Sponsors Patreon integration which allowed creators an additional route within GitHub Sponsors to receive funding

Senior Engineer

April 2021 — September 2022

GitHub

GitHub focuses on tools to build software and connect people in the world of open source

- Operated as the manager for the discussions team for 6 months
- Drove splitting the oversized routes file into separate files and to make the codebase more maintainable
- Anchored the team for a year acting as lead and point of contact for external teams and assuring work was moving forward
- Assisted in moving GitHub's community to the GitHub Discussions platform

Lead Engineer

March 2020 — April 2021

Stitch Fix

Stitch Fix focuses on providing a personal style service to a variety of customers

- Worked on a collaboration shopping experience with an influencer
- Worked on a dynamic shopping experience for clients
- Expanded the direct purchase platform

Senior Application Engineer

December 2016 — February 2020

GitHub

GitHub focuses on tools to build software and connect people in the world of open source

- Worked with the Community & Safety team to close abuse vectors in our existing codebase to make our users safer

- Added edit history to PRs, Issues, and comments so users could see what changed, when, and by whom
- Worked with other teams to determine what abuse vectors would be in their new features and how to best close them

Software Engineer

July 2013 — November 2016

Articulate Global

Articulate focuses on the world of e-learning with a variety of products to help support e-learning environments

- Built and launched the largest community website for e-learning professionals
- Designed and integrated single sign on for all Articulate products

Software Engineer R&D

June 2012 — April 2013

Branding Brand

Branding Brand is a company that focuses on facilitating mobile e-commerce for it's business partners

- Built a third party shopping API so purchases could easily happen through partner websites
- Developed tools to assist in "transcoding" partner websites for mobile consumption

Software Engineer

January 2010 — August 2010

Deeplocal

Deeplocal is a technology company that builds innovative tech for advertising

- Wrote a script to automatically update public transit data
- Completed and tweaked an iPhone game for self parking cars
- Released a motherhood community website

Instructor

June 2009 — August 2009

Technology Leadership Initiative

TLI is a group that focuses on bringing computer science education to students that do not have access to programming classes in school

- Wrote lesson plans for JavaScript, Robotics, and Computational Thinking classes
- Co-taught classes for 13-15 year old students

Education

University of Pittsburgh

August 2005 — December 2008

Bachelor in Computer Science

University of Pittsburgh

August 2009 — April 2012

Masters (incomplete) in Computer Science

Publications

Artful Games

March 2016

The Recompiler

Examining a different way to think about video games from the perspective of my own projects

206: With Rachel White and Lindsey Bieda

March 2016

Shop Talk Show

If you've ever wondered about how to get into game development, this episode will get you excited about trying to code your first game.

Hardware, Hula Hoops, and Flow

June 2016

Open Source Bridge

Anti-Oppression 101 with Steve Klabnik

August 2012

Steel City Ruby & Madison Ruby Conf

Awards

Volunteer

Organizer and Teacher

January 2012 — January 2013

Girl Develop It

A non-profit organization to help provide affordable tech instruction to women

- Started the Pittsburgh branch of GDI
- Wrote additional course materials
- Organized events and taught classes
